About Me

I am a Flutter developer with over 3 years of experience building mobile apps for Android and iOS. I have worked at two companies and shipped more than five apps from scratch to production. My focus areas are GetX and Provider for state management, Firebase for backend, and keeping code clean and organized. I enjoy working in teams, picking up tasks independently, and making sure the final product feels good to use.

Skills

Languages	Dart, Kotlin, Java
Mobile	Flutter SDK, Android (native), cross-platform iOS & Android
State Mgmt	GetX, Provider, BLoC
Backend	Firebase (Auth, Firestore, Cloud Messaging)
APIs	REST API integration(interceptor), Postman, Stripe payment gateway
UI/UX	Figma, Adobe XD (Design-to-Code Implementation/Inspection, Pixel-Perfect UI Development)
Tools	Git, GitHub, Android Studio, VS Code, CI/CD-Fastlane

Work Experience

Flutter Developer @ [Maxlink IT Solutions Pvt. Ltd.](#)

Apr 2024 – May 2026

- Built three full Flutter apps (the Saya series) using GetX and a clean architecture setup. App load times improved by around 40% compared to the earlier versions.
- Set up Firebase Cloud Messaging for push notifications and connected Firestore for live data sync across the apps.
- Created a shared component library and added localization support, which cut down the time needed for new features by about 25%.
- Handled CI/CD setup and did regular code reviews to keep releases stable before going to production and also handled WebSockets.

Flutter Developer @ [Codemastr Apps Pvt. Ltd.](#)

Sep 2023 – Mar 2024

- Worked on two apps — IoT-Base, a real-time analytics tool for IoT devices, and TagiFiles, a file manager with encrypted cloud sync.
- Integrated multiple REST APIs using Provider for state. Data stayed consistent across devices 99.9% of the time during testing.
- Worked closely with the design and product team to ship two major features before the planned deadlines.

Android Developer Intern @ [Pardy Panda Studios Pvt. Ltd.](#)

Jun 2023 – Sep 2023

- Built Android screens in Kotlin and added Firebase authentication to the app.

- Improved how the app handled local storage(roomDB) and background notifications, which made it feel faster and more reliable.

Projects

Saya App Series *Flutter · GetX · Firebase · REST API*

Three production apps with real-time sync, push notifications, and localization. Achieved 40% better load speed.

Parth HRMS *Flutter · GetX · REST API*

HR management system app on the Play Store — attendance, leave, and employee workflows in one clean mobile experience.

IoT-Base & TagiFiles *Flutter · Provider · REST API*

IoT-Base tracks device analytics in real time. TagiFiles handles encrypted file sync to the cloud with two-way updates.

Utility App *Flutter · GetX · Hive · FREE REST API*

Personal project combining notes, music player, chat, news, and CRUD — five modules in one clean codebase.

Education

B.Tech in Computer Science & Engineering

2019 – 2023

Parul Institute of Engineering & Technology, Gujarat
